

Adjustable Sign Holder

Innovation Purpose

There was not an area to mount signs without drilling holes in the extruded signs or the I-beam.

Innovation Description

We feel it has helped several people including both Maintenance and Construction. Also helping the general public knowing the route of the detour. With not all extruded signs being the same size, the bracket is adjustable to hold 1 or multiple signs. Also, will save the lifetime of the extruded sign and I-beam by not drilling any holes weakening either one.

Implementation Date

Innovation Highlights

We feel people should vote because there is a cheap easy way to make a sign holder knowing that the low budget is here and only using some welding wire and few bolts as an expense. It will make the extruded signs last longer not having any holes in the sign nor having holes in the I-beams.
